ELMORE WASTE DISPOSAL

I am arranging with ESD to have them put in 2 or 3 temporary monitoring wells to the N and NW of the Elmore property. Groundwater data is needed from downgradient in these two directions because the most contaminated wells are those in the northernmost well cluster (6). Draft RI report w/ risk assessment is due on December 3; the GW data from these temporary wells will be incorporated into the final RI report in January.

MEDLEY FARM

No change. Still trying to get a date that the CD will be lodged.

TOWNSEND SAW CHAIN

Textron turned in a Tech Memo on how they see the upcoming RI/FS. Comments will be collated and sent to them on Monday Nov. 4th. Generally they're on the right track, but they are trying to skimp in a few places. The draft RI/FS Work Plan will be due in mid-December.
